

 Instagrid

APP

Instagrid APP

Instagrid APP provides a fully-connected experience that enhances convenience, data accessibility, security, and fleet management for your Instagrid products.

- Keep your Instagrid units up to date with the latest software and feature releases via Bluetooth updates.
- Monitor your whole fleet as well as access in-depth, real-time unit information.
- Geotracking helps you to manage your fleet at different locations and to protect against theft.

Scan & download Instagrid APP

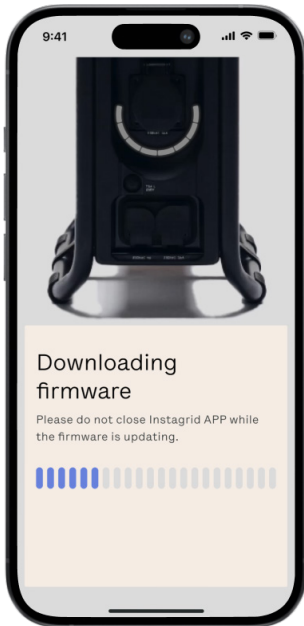

Fleet management

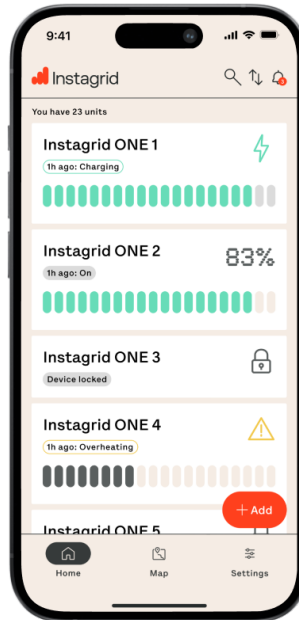

Firmware updates

Access the latest releases and features.

Quick overview

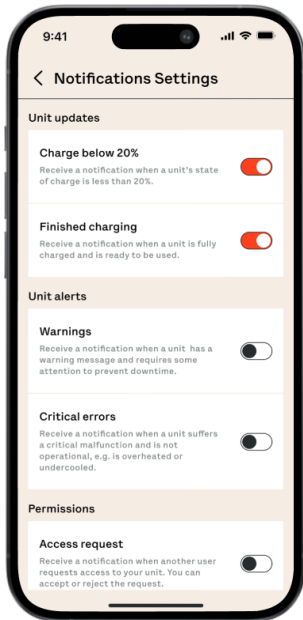

Your entire fleet at a glance.

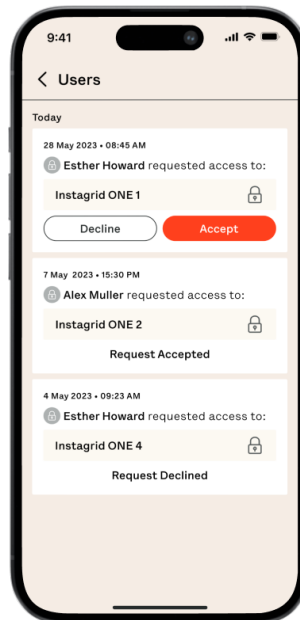

Notifications

You are immediately informed of any status changes.

User hierarchy

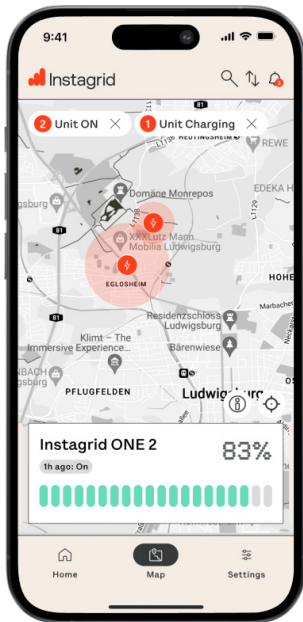

Manage user access and optimise collaboration within your organization.

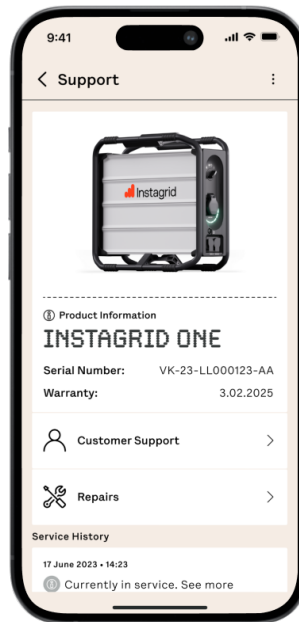

Real time location

Manage your fleet and protect against theft.

Support & service history

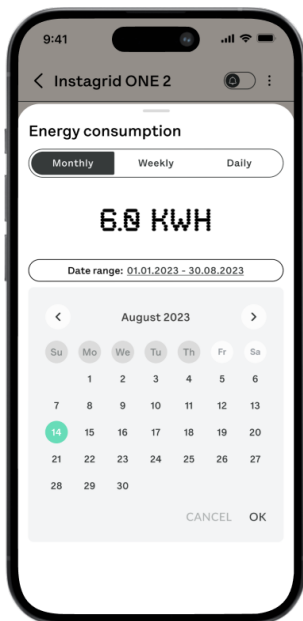

Easily monitor your service history and contact customer support.

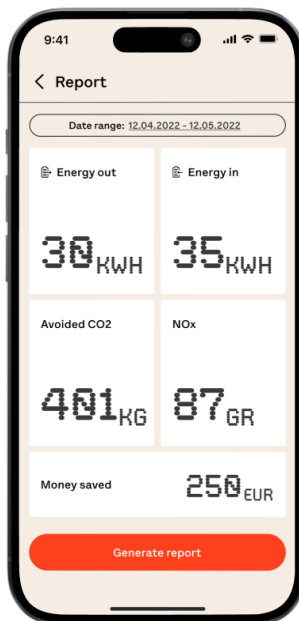

Statistics

Get insights into how your units are used.

Generate reports

View your energy consumption and sustainability metrics.

Location tracking

Our location tracking feature utilizes a combination of GPS and cell tower triangulation in order to ensure accurate and reliable information about the location of your Instagrid unit. GPS provides precise location data and in areas with a limited GPS signal, cell tower triangulation provides additional coverage.

Real time monitoring

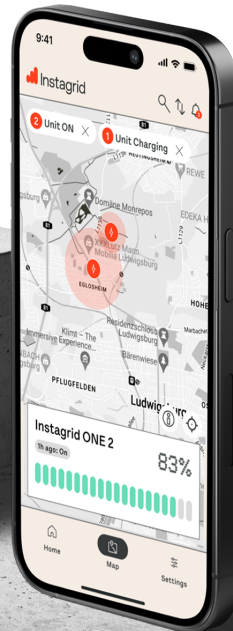

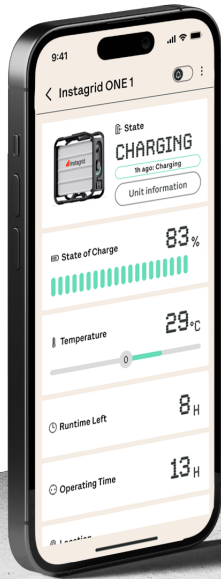

Your Instagrid unit will constantly share its real-time location provided that it is turned on and location tracking is enabled.

Unit registration

Simply register your Instagrid unit within Instagrid APP to initiate tracking. This ensures that you will always know the exact location of your units.

Instagrid APP connects all country-specific variants of the Instagrid product portfolio.

Product data

Instagrid APP gives you a wide array of useful data about your Instagrid products.

State of charge

Current state of charge.

Receive an alert when it is low.

Temperature

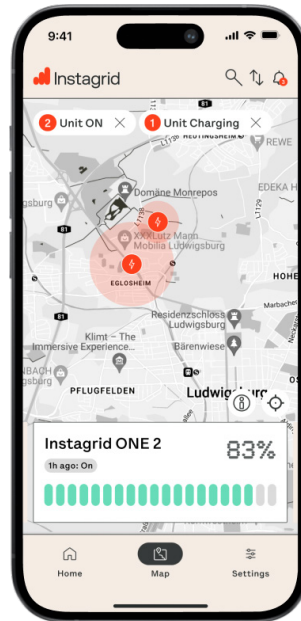

Current internal (cell)

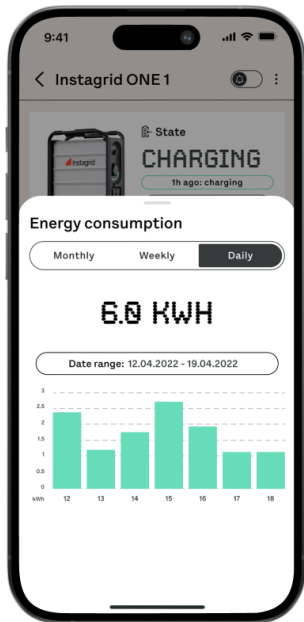

temperature. Receive an alert if unit overheats.

Remaining runtime

Estimated remaining runtime of device you are powering.

Operating time

Monitoring of active and idle time.

Energy information

Tracking of your energy usage.

Charge cycles

Number of total charge cycles and state of health.

Fleet data

Understanding your power consumption is much easier with battery technology than it is with portable combustion generators.

Instagrid APP provides you highly useful insights into your daily energy needs.

Energy consumption

See statistics about your fleet energy consumption.

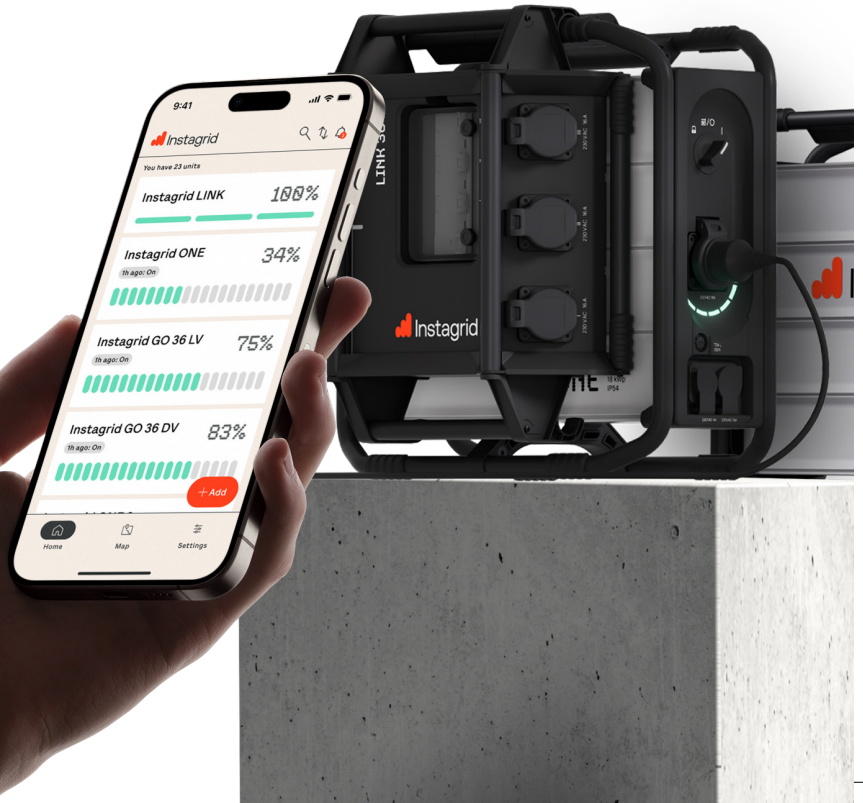

Utilization rate

Monitor overall usage of units within your fleet.

Connecting the dots

At the centre of the Instagrid ecosystem is Instagrid APP. All data about physical products is collected and stored within our cloud-based solution, enabling streamlined fleet management and powerful reporting features.

Utilizing advanced algorithms and secure protocols, the cloud platform continuously receives and aggregates real-time data streams from your Instagrid fleet. All data collection by Instagrid APP is in full compliance with local privacy regulations, adding an extra layer of security to your operations.
